

DAY- 4 TASK REPORT

LLM : large language model

1. Takes text as input
2. It predicts next token
3. Generates the text as output

“In this llm ,trained on huge amount of data.takes text as input gives text as output”

Example :

GPT - 4 ,CLAUDE,GEMINI

AI AGENT :

1. It receives a task .
2. By using the llm model it plans the steps.
3. Then by using some tools such as search , code , etc,.
4. Takes the action in the world
5. Their is a loop between tools and action .
6. In this llm ,memory and tools plays main role for multiple steps.

Example :

CLUADE, AUTOGPT

RAG : retrieval augmented generation

1. In this RAG user asks a question
2. Searches on knowledge base.
3. Then it retrieves relevant docs

4. Finally llm gives the accurate answer to user.

Example:

Chatbots
